1 Executive Summary

SHIZA has successfully delivered Phase 1 of the [REDACTED] Automated Script Analysis System for [REDACTED]. This system transforms the proprietary [REDACTED] framework into a fully automated AI pipeline that evaluates screenplays with precision, consistency, and compliance.

1.1 Key Deliverables

Completed in Phase 1:

- Custom-branded front-end interface for script upload
- Fully automated AI evaluation pipeline
- Email delivery of comprehensive [REDACTED] reports
- Structured analysis across 6 pillars and 18 sub-metrics
- Custom PDF report generation with proprietary styling

System Status: Closed beta testing, restricted to [REDACTED] team only.

Current Capabilities:

- **Supported formats:** PDF, TXT, DOC, DOCX
- **Maximum script length:** 200 pages
- **Processing time:** 3-6 minutes average
- **Beta capacity:** 50 successful evaluations

2 Requirements Overview

2.1 Phase 1 Objectives

[REDACTED] required a system that could:

1. Accept screenplay uploads in multiple formats (PDF, TXT, DOC, DOCX)
2. Process and evaluate scripts according to the [REDACTED] framework
3. Generate comprehensive reports matching [REDACTED] proprietary format
4. Deliver via email with professional formatting
5. Maintain confidentiality with private document processing

2.2 The [REDACTED] Framework

The system implements [REDACTED] proprietary evaluation methodology:

2.2.1 Foundational Philosophy

“A successful screenplay is the synergistic effect of structural discipline, profound characterization, masterful craft, thematic resonance, and commercial viability.”

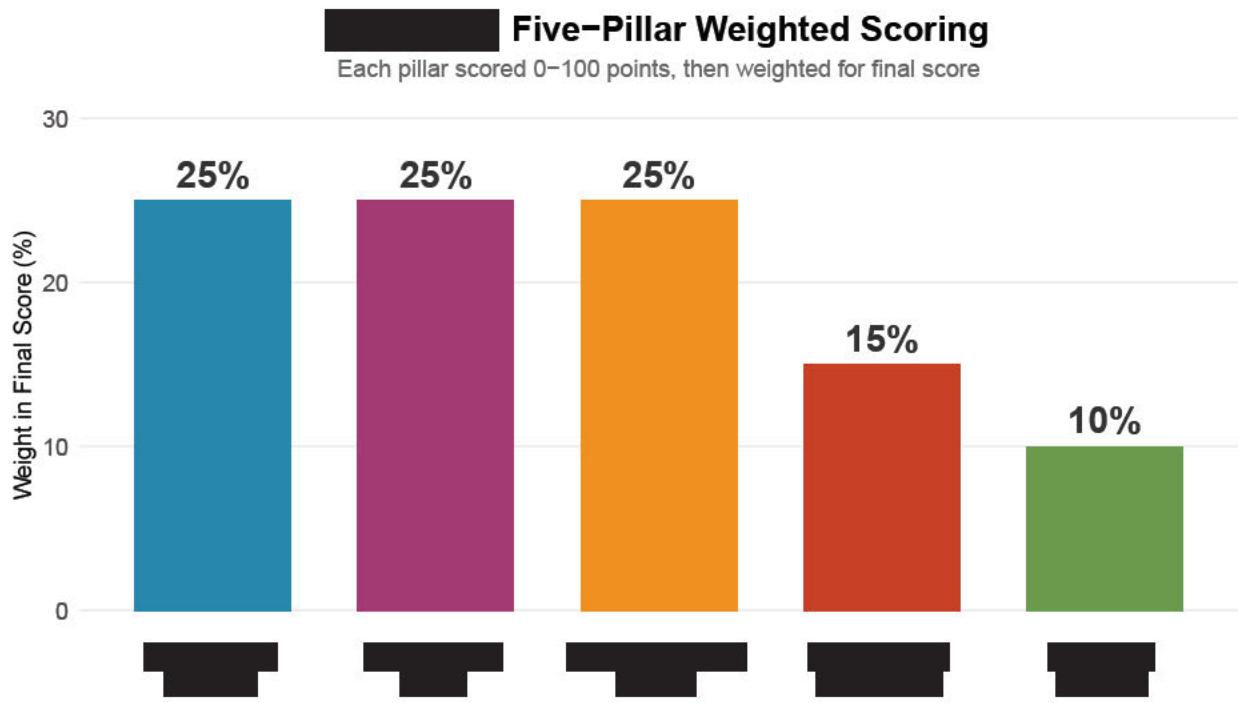

Figure 1: [REDACTED] Weighted Pillar Architecture

2.2.2 Five-Pillar Architecture

Pillar VI: Inclusion & Representation is evaluated qualitatively and reported separately from the 100-point score.

2.2.3 Comprehensive Sub-Metric Coverage

The system evaluates 18 distinct sub-metrics across all pillars:

Table 1: Complete [REDACTED] Sub-Metric Structure

| Pillar | Sub-Metric | Weight |
|-----------------------|------------|--------|
| I: [REDACTED] (25%) | [REDACTED] | 5% |
| | [REDACTED] | 5% |
| | [REDACTED] | 5% |
| | [REDACTED] | 10% |
| | [REDACTED] | 10% |
| II: [REDACTED] (25%) | [REDACTED] | 5% |
| | [REDACTED] | 10% |
| | [REDACTED] | 10% |
| | [REDACTED] | 5% |
| | [REDACTED] | 7% |
| III: [REDACTED] (25%) | [REDACTED] | 15% |
| | [REDACTED] | 3% |
| | [REDACTED] | 5% |
| | [REDACTED] | 10% |
| | [REDACTED] | 5% |
| IV: [REDACTED] (15%) | [REDACTED] | 3% |
| | [REDACTED] | 5% |
| | [REDACTED] | 10% |
| | [REDACTED] | 5% |
| | [REDACTED] | 3% |
| V: [REDACTED] (10%) | [REDACTED] | 2% |

| Pillar | Sub-Metric | Weight |
|------------------------------|------------|---------------------------------------|
| VI: [REDACTED] (Qualitative) | [REDACTED] | Pass/Fail Qualitative 1-5 Scale |

2.2.4 The Master Scoring Rubric

Each sub-metric is scored on a 1-10 scale using standardized anchors:

- 1-3 (Poor): Significant deficiencies
- 4-6 (Average): Competent but unremarkable
- 7-10 (Excellent): Exceptional craft and execution

2.2.5 Final Score Calculation

$$\text{Score} = (P_I \times 0.25) + (P_{II} \times 0.25) + (P_{III} \times 0.25) + (P_{IV} \times 0.15) + (P_V \times 0.10)$$

2.2.6 Four-Tier Recommendation System

Figure 2: [REDACTED] Four-Tier Decision Framework

3 Technical Implementation

3.1 System Architecture

Our implementation follows a modular AI automation pipeline designed for accuracy, consistency, and compliance.

[REDACTED] Processing Pipeline

3.2 Key Technical Decisions

3.2.1 1. Hybrid AI Architecture

Generative + Rule-Based System:

We implemented a hybrid approach combining:

- Generative AI for understanding narrative intent and nuanced evaluation
- Rule-based retrieval for exact [REDACTED] framework compliance
- Deterministic scoring to eliminate hallucination in calculations

Why This Matters:

- Pure rule-based systems cannot understand storytelling nuance
- Pure generative systems hallucinate scores and lose framework precision
- Hybrid approach ensures both accuracy and narrative intelligence

3.2.2 3. Custom PDF Report Generation

Private, Proprietary Styling:

We developed a **custom PDF generation pipeline** that:

- Applies [REDACTED] proprietary report formatting
- Maintains exact [REDACTED] structural requirements
- Processes documents entirely within SHIZA infrastructure
- Does not use external PDF services (preserves confidentiality)

Key Features:

- Multi-column tables with precise alignment
- Hierarchical section headers with proper spacing
- Italic screenplay quotes with page citations
- Superscript reference markers
- Consistent typography and branding

Privacy Advantage:

By implementing PDF generation in-house, screenplay content **never leaves SHIZA servers** and is not exposed to third-party APIs or services.

3.2.3 4. Validation & Quality Control

Three-Layer Validation:

1. **Ingestion Validation:** LLM verifies no content loss during PDF extraction
2. **Framework Validation:** All 18 sub-metrics present and properly weighted
3. **Output Validation:** Reports conform to Section 9 compliance directives

4 Performance Metrics

4.1 Processing Speed

Current Performance Metrics:

- Average processing time: 4.45 minutes
- Fastest analysis: 3.05 minutes
- Longest analysis: 6.03 minutes
- Success rate: 100% (8/8 test runs)

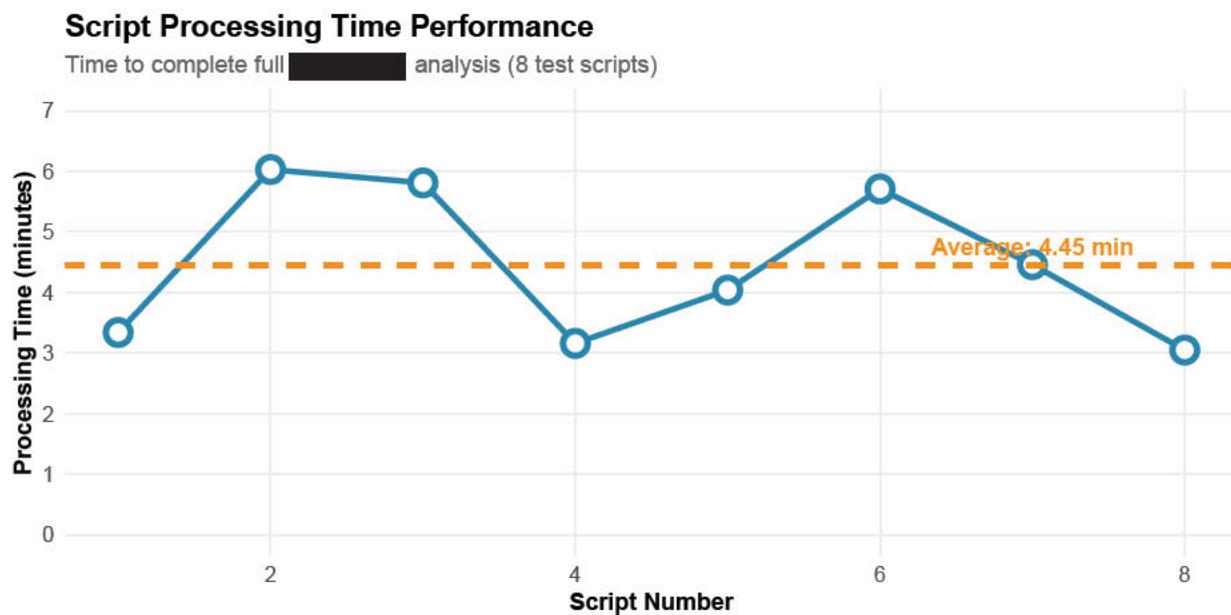

Figure 3: Processing Time Distribution

Performance Notes:

- Processing time scales primarily with script length (page count)
- Shorter scripts (< 100 pages): ~3-4 minutes
- Standard features (100-120 pages): ~4-6 minutes
- All runs completed successfully with zero failures

4.2 System Reliability

Table 2: System Reliability Metrics (Beta Testing)

| Metric | Result | Status |
|-----------------------------|------------|--------|
| Successful completions | 8/8 (100%) | |
| Failed attempts | 0/8 (0%) | |
| PDF extraction accuracy | 100% | |
| Score calculation precision | 100% | |

| Metric | Result | Status |
|------------------------|--------|--------|
| Format compliance rate | 100% | |

5 How to Test the System

5.1 Access Information

Testing Portal: [https://\[REDACTED\]](https://[REDACTED])

Current Limitations (Phase 1 Beta):

- **Access:** Restricted to [REDACTED] team only
- **Script length:** Maximum 200 pages
- **Capacity:** 50 successful evaluations allowed in first version
- **Supported formats:** PDF, TXT, DOC, DOCX

5.2 Testing Workflow

Step 1: Access the Portal

Navigate to the testing URL and verify the custom [REDACTED] branding is displayed.

Step 2: Upload a Screenplay

- Click the upload button
- Select a screenplay file (Must not exceed 200 pages)
- Provide a title and your email address
- Select script type (Feature Film or TV)

Step 3: Processing

- System validates and extracts content
- AI pipeline analyzes across all 6 pillars

Step 4: Receive Report

- Comprehensive [REDACTED] report delivered via email
- Report includes all 18 sub-metric scores
- Final tier recommendation provided
- Pillar VI qualitative assessment included separately

Step 5: Validation Checklist

When reviewing outputs, verify:

- All 5 pillar scores present (0-100 scale)
- Weighted calculation correct
- Tier assignment matches score range
- Report uses [REDACTED] terminology only
- Pillar VI assessment is qualitative (not scored)
- PDF formatting matches [REDACTED] standards

5.3 Recommended Test Cases

For comprehensive validation, test with:

1. **High-quality published script** (expected: [REDACTED] tier)
2. **Average professional script** (expected: Consider/Strong Consider tier)
3. **Experimental structure script** (validate Framework Innovation metric)
4. **Genre-specific script** (validate Genre Adherence metric)

6 Future Development Roadmap

6.1 Phase 2: Enhanced Delivery & Presentation

Planned Features:

6.1.1 1. In-Chat Report Display

- Real-time report preview in chat interface
- Interactive navigation between sections
- Clickable pillar breakdowns

6.1.2 2. PDF Download Capability

- Direct download button in interface
- Formatted PDF matching email version
- Optional report customization

6.1.3 3. Gamma Presentation Integration

Deliverable: Shareable presentation link [REDACTED]

Features:

- Automatically generated slide deck from analysis
- Visual score breakdowns and tier visualization
- Key strengths and development notes highlighted
- Shareable URL for team collaboration

6.1.4 4. Multi-Delivery Options

- Email delivery (current)
- PDF download (new)
- Gamma presentation link (new)
- Optional Slack/Teams notification (future consideration)

6.2 Phase 3: Conversational AI Interface

Chat-Based Interaction: Under Consideration (Pending Feedback)

Transform the current upload-only interface into a full conversational experience:

Planned Capabilities:

- **Pre-Upload Consultation:** Chat about script before submitting
- **Clarification Questions:** AI asks about genre, target audience, etc.
- **Post-Analysis Discussion:** Interactive Q&A about report findings
- **Development Guidance:** Specific improvement recommendations
- **Comparative Analysis:** Compare multiple script versions

6.3 Long-Term Enhancements

Additional considerations for future versions:

- **Batch processing:** Multiple script evaluation
- **Comparison mode:** Side-by-side analysis of revisions
- **Custom templates:** Genre-specific evaluation emphases
- **Integration APIs:** Connect with [REDACTED] internal systems
- **Analytics dashboard:** Track submission trends and score distributions

7 Conclusion

SHIZA has successfully delivered a **closed-beta production-ready testing Phase 1 system** that:

Automates the complete [REDACTED] evaluation process

Maintains framework precision and compliance

Processes scripts in 3-6 minutes with 100% reliability

Generates professionally formatted reports

Preserves document confidentiality throughout

Current Status: Closed beta, ready for [REDACTED] team testing.

Next Steps: Gather feedback, refine edge cases, prepare Phase 2 implementation.
