THE PRIVACY LAYER FOR SOLANA TRANSFERS

On-chain transparency turned into ***surveillance***

Every transaction exposes identity patterns.

Wallet-to-wallet transfers are traceable forever.

Traders, whales, DAOs, devs exposed to chain analysis.

Multi-wallet strategies are tedious and still linkable.

Bubblemaps link excessively

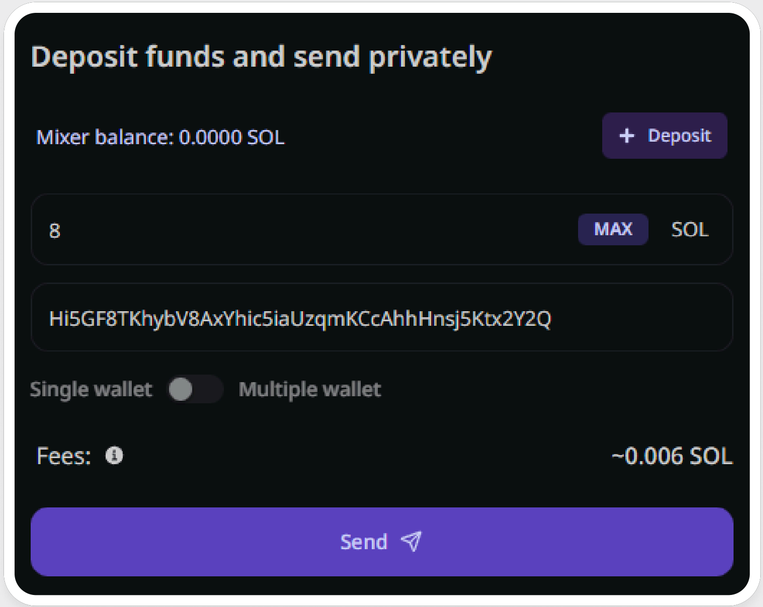
The Solution

Mixoor is a privacy protocol that enables

untraceable transfers

in 2 simple steps

1. Deposit from Wallet A
2. Withdraw to Wallet B (or multiple wallets)



With zero on-chain connection between deposit and withdrawal powered by:

- Encrypted deposit data
- Nullifiers
- Merkle Trees
- A private indexer
- Smart contract enforced unlinkability

Mixoor is a non-custodial privacy protocol enabling unlinked transfers on Solana using encrypted data, nullifiers, and a private indexer.

Mixoor is ***different***

- Only protocol built from trenches (degens, token launches, operational privacy).
- Only one with community governance through the token.
- Only Solana-first mixer with roadmap to infra (APIs/SDK).
- Designed for ALL Solana users (traders + devs + DAOs + everyday).
- Real-time private withdrawals (instant).
- Non-custodial + encrypted + indexer + nullifiers = Tornado Cash but usable.
- “Mixoor is the first PCM protocol (Privacy Capital Market) on Solana.”

Mixoor is designed for
all Solana users

Traders and Degens

Hide entries/exits.
Prevent frontrunners.
Avoid snipe and copytrade.

Builders/Devs

Unlink dev wallets.
Hide deploy and funding patterns.

Teams and DAOs

Private payroll.
Hide Bussines payments
Unlinked contributor payments.

Everyday Users

Protect balances and patterns.
Avoid wallet profiling.
Just want privacy.

The Market

Privacy protocols TVL are

Mixoor **born in trenches** looking for unlink wallets used during token launches.

Now stands as a **private transfer protocol** allowing major use cases.

Onwards will look for integrations, new features and scalability becoming an **open source community driven protocol** governed by $MIXOOR holders.

The Future

roadmap

this is how Mixoor will grow

Q4 2025

- App Launch
- indexer stability
- Protocol Audit
- Token Launch

Q1 2026

- Leaderboard
- S1 Airdrop
- New features
- KOL marketing
- Partnerships

Q2 2026

- API/SDK
- Governance + incentives

Q3 2026

- New features and audits
- Expanding EVM
- CEX listing

The Revenue

Business Model

a Recurrent Revenue business model that keeps growing

- Withdrawal fees: 0.15%
- Token $MIXOOR fees

Go to Market

1 Solana Deployment

Mixoor kicks off in Solana powered by Smithii Tools where it borns as an user needs. Smithii hace thousand of daily users, ppl from trenches and long term projects, thy where in mind at the moment Mixoor appear but we see it can be bigger as a brand new project.

2 Token Launch

As part of the degen narrative and marketing strategy, $MIXOOR will be launched as the project's governance token looking to become a new concept in ICM: PCM (Privacy Capital Market) A decentralized privacy infrastructure for Solana, owned and steered by its community

who

The Team

We got the talent needed to build a privacy layer on Solana

Jorge started doing eCommerce at 16. At 19, he moved to Crypto and co-founded Smithii, growing it to $2M AR. Became DeFi expert funding the robo-advisor LinceFinance.

Omar is a chemical techie that fell in Love with Solana since 2021,
when he started coding rust. Co-founded Smithii and built the whole infrastructure for +3k users per month.

Juan is former military in argentinian navy, start doing SEO and web 2.0 marketing. Landing in web3 to work on Smithii's marketing and became the current CEO.

Transparency is cool until it becomes surveillance
